

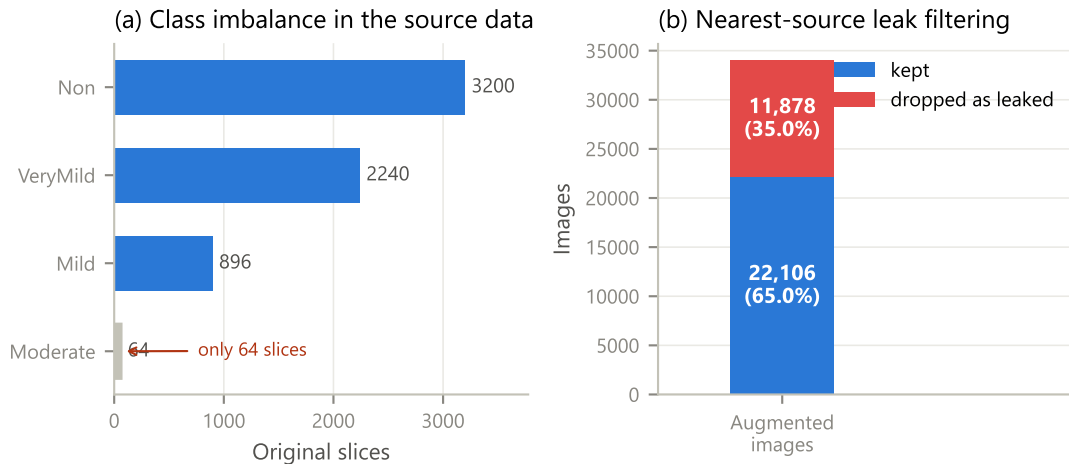

Figure 1 — Dataset composition and leakage control

Validation of the filter

Originals held out
35.0%

Augmented dropped
35.0%

If each augmented image is correctly assigned to its source, the dropped fraction must match the held-out fraction. It does, to within 0.1 points.

Final training set: 26,266 images (4,160 original + 22,106 augmented)
